

Managed Cloud Hosting

A choice of premium Cloud Web Hosting from **[your company]**, AWS or Google

If you're running a busy, business-critical website, you can't afford to cut corners.

Get the peace of mind of that comes with using premium cloud hosting, without the complexity.

Keeping it simple

If you've had experience of trying to set up hosting with the big cloud providers, our managed cloud offering will come as a breath of fresh air.

It's as simple as:

1. Choose the size of your Managed Cloud Hosting server
2. Choose your provider **[your company]**, AWS or Google
3. Migrate your website(s) over automatically, for free

It's ideal for sites like growing and popular ecommerce businesses, or digital agencies and developers.

[Insert pricing table, for example:

Cores	1	2	4	8	16	32...
Your company	Price	Price	Price	Price	Price	Price
AWS	Price	Price	Price	Price	Price	Price
GCP	Price	Price	Price	Price	Price	Price

You may want to have separate tables for your cloud, AWS and GCP, or simply just offer some example servers and prices, and ask your customers to get in touch to receive a quote tailored to their needs.

It's important to note that bandwidth charges will apply on AWS and GCP, and if the 'YourCloud' bandwidth allowance is exceeded]

Managed Cloud Hosting Features

Edit this list as necessary.

- 99.99% uptime guarantee

- Optimised for Magento with Redis and Elasticsearch
- No cap on PHP Workers
- WordPress staging
- WordPress cloning
- WordPress edge caching plugin
- Free, automatic malware scans
- Full DNS control
- Git version control UI
- PCI compliant hosting

Fully-Managed Cloud Hosting Benefits

One feature-rich control panel to manage everything

All our services are managed from our powerful and easy to use control panel. So, you could manage one website on shared hosting, two websites on Amazon, two on Google, and five on [your company] Cloud – all in one place. And you're not limited to websites: databases, domains, email, files, Git version control and much more can all be managed centrally. It's all one integrated hosting service.

A team of cloud hosting experts at your back

You'll have access to the same hosting used by the largest companies in the world. So you'll get the best teams of hosting and network security experts behind you. They have access to the latest training and technologies to ensure that your cloud server remains faultless.

The best data centres and networks

You'll be using the same data centres favoured by the likes of Amazon and Google, with presence in regions across the globe. Your traffic will flow over the best networks, ensuring your data packets are prioritised and travel the shortest distance, improving website performance.

Email included

No need to set up separate server for your email: unlimited business email is included with all our Managed Cloud Hosting. Plus it's won't eat into your compute or storage – it's handled away from your web server.

Ecommerce-ready hosting

You can choose a cloud server that's been optimised for online stores. PHP-FPM and PHP OPcache will speed up WooCommerce, while Redis and Elasticsearch will allow you to take advantage of Magento's latest features. By being faster and more secure, your ecommerce site may get a higher ROI.

Unstoppable performance

With compute, memory and storage dedicated solely to your website(s), you won't find faster hosting anywhere else. We use brand-name hardware from the likes of Intel, Samsung and Dell.

Flexibility baked-in

One of the main advantages of cloud hosting is its flexibility. Should your website begin to approach the limits of your chosen package, you can scale it up instantly, at any time.

Reliability and uptime

As we manage and maintain the underlying infrastructure, your business can benefit from higher levels of uptime and less downtime due to hardware or software failures.

80+ Website Apps

Managed Cloud Hosting comes with over eighty apps, designed to make site creation and management easy. They include Drupal, Joomla!, Laravel, OpenCart, Magento, Moodle, PrestaShop, Roundcube and WordPress. They're all free and be installed in a click.

FAQs

What is Managed Cloud Web Hosting?

Managed Cloud Web Hosting gives you a virtual private server (VPS), dedicated to your website – or websites. Dependent on the size of the VPS you purchase and its resources, you can host as many sites as you like.

This is different to our shared hosting, where your website will share resources from our multi-server hosting platform.

Unlike a standard VPS, you don't have to concern your self with its setup and maintenance – that's done by our team or those at Amazon or Google. You get a simple user-friendly control panel to manage and monitor your Managed Cloud Hosting. From the same control panel, you can manage any other services you buy through us.

If you need a recommendation on what would be the best Managed Cloud Hosting for you, please get in touch.

Should I use shared or Managed Cloud Hosting?

For small businesses or personal projects, our shared web hosting on WordPress or Linux is more than capable and best value. If your website is very busy, or you wish to host multiple busy websites, we'd recommend our Managed Cloud Web hosting. Get in touch if you have any questions.

Should I use [your company] Cloud, Amazon Web Services or Google Cloud?

Our Managed Cloud Hosting is best value, especially as it includes free bandwidth (up to a limit). By the number of users, Amazon Web Services (AWS) is the leading cloud platform, while the Google Cloud Platform (GCP) is a close second.

Amazon has more datacentres than Google, but both provide global coverage. AWS offers a larger range of services than GCP, but they both offer web hosting.

If you already use AWS or GCP, you may wish to continue your current services by migrating them to us to make your cloud hosting better value and easier to manage.

If you'd like an honest recommendation of which hosting package is best suited to your website, please contact us.
